

Worksheet 3: Section 1.3

Complex Numbers

Name: _____

Date: _____

Imaginary Numbers

$$i = \sqrt{-1} \implies i^2 = -1 \implies \sqrt{-b} = i\sqrt{b} \text{ for } b > 0$$

Standard Complex Form

$a + bi$ where a is the real part and b is the imaginary part

Adding and Subtracting Complex Numbers

$$(a + bi) + (c + di) = (a + c) + (b + d)i$$

$$(a + bi) - (c + di) = (a - c) + (b - d)i$$

Multiplying Complex Numbers

Use distributive property (FOIL), remember $i^2 = -1$.

Complex Conjugates

$$(a + bi)(a - bi) = a^2 + b^2 \quad (\text{always a real number})$$

Dividing Complex Numbers

Multiply numerator and denominator by the conjugate of the denominator.

$$\frac{a + bi}{c + di} \cdot \frac{c - di}{c - di}$$
